

- NOTES:
- We do not run power injection.
 - For simplicity, each output from controller is 1 universe.
 - So each controller is 16 universes and 16 outputs which handles up to 1,600 lights per controller.
 - We run our lights at 50% power to avoid needing a second PSU.
 - Our show has almost 17,000 pixels/lights, 51,000 channels, 12 controllers and 192 Universes.

TRISTA LIGHTS
www.tristalights.com
